

# D-CON Flash

## Stain Remover Concentrate 0,5 %

### PHYSICAL DATA ●

#### D-CON Flash

Appearance / Colour	Pale Yellow liquid
Concentration of use	0,5 %
Specific Gravity at 20°C (Kg/dm <sup>3</sup> )	1.10
Viscosity at 20°C (cStokes)	200
Freezing point	-8°C
Ph at 20°C (0,5 % solution)	10,5
Sediment after ageing	None
Surface tension at 0,5 % (mN/m)	25

### PERFORMANCE, USE & WARRANTY ●

D-CON Flash is a very powerful additive, designed to eliminate contaminants and stain on textiles. It is very efficient to remove solid particles, grease, oil and solvents.

D-CON Flash has been conceived to decontaminate and clean the protective clothing of firefighters, who are directly exposed to highly polluting smokes produced by fires. Indeed, there are several types of smoke, always toxic, depending on the type of fuel. This smoke generates a deposit of particles that penetrate the firefighter suit, staying fixed. These particles are usually fatty, so it is necessary to use a specific powerful detergent to eliminate them definitively from the fabric or suit.

D-CON Flash must be used at 0.5% with a portable

dosing equipment - HandyFoam type - to ensure an efficient cleaning.

Spray the product onto the textile, clean the fabric with a brush and leave the product for 5 minutes. Then, it should be cleaned with water.

D-CON Flash can be diluted with fresh water.

D-CON Flash respects the fabrics used in fire protection suits. It does not affect the properties of textiles such as NOMEX / GORE-TEX, preserving the quality of protection against heat, pollution and abrasion.

D-CON Flash has a 5-year warranty stored in its original packaging between 0°C / +60°C.
