BARIATRIC TRAINING MANIKINS AND RELATED PRODUCTS

BARIATRIC TRAINING

A HEAVY WEIGHT PROBLEM

Obesity is a global problem and facts indicate that it is a growing issue.

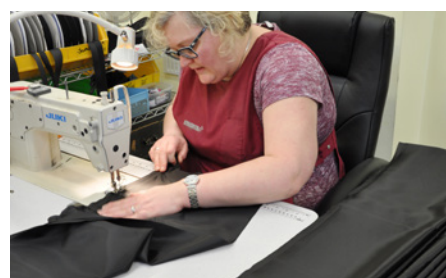

Data from the NHS (<https://digital.nhs.uk/catalogue/PUB23742>) shows that in 2015, **58% of woman** and **68% of men** were overweight or obese and that obesity **prevalence increased from 15% in 1993 to 27% in 2015**.

This means that all industries will have a requirement to train to safely handle heavier people in an emergency. Training manikins are the ideal tool for ensuring that your staff know the correct way to move or even lift a bariatric person in an emergency.

WHY RUTH LEE

Ruth Lee Ltd are market leaders in the design and manufacture of training manikins. With more than 60 years' experience, our manikins are tough enough for the fire service and military, and also weighted proportionately to be anatomically correct, for more realistic training.

Our products have been designed in consultation with customers to ensure that we provide you with the very best manikins for your training.

BENEFITS OF TRAINING WITH A RUTH LEE MANIKIN

- > Avoid costly staff absences caused through workplace injury with effective training.
- > The whole team can participate - no one has to volunteer to be the patient (and avoids embarrassment of choosing the heaviest person to train with!)
- > A range of bariatric solutions, letting you tailor your training to your teams' requirements.
- > Bring your training in-house and save money on external courses.

SPEAK TO THE EXPERTS

We would be pleased to offer advice on our range of training products.

01490 413 282

BARIATRIC MANIKINS

Our Bariatric range includes manikins at 90, 180 or 260kgs, with the 90kg manikin being the perfect choice when you require a dummy with bulk, but without excessive weight.

These manikins are realistic to work with, having a 'fluidity of movement' rather than just creating a heavy lump!

Supplied with a carry sheet with safe working load of 600kg (LOLER certified), soft boots and pyjamas.

WATER-FILLABLE BARIATRIC SUIT

Our new Water-Fillable Bariatric Suit is a lightweight and flexible option. Weighing just 5kg the kit is light enough for one person to carry into position and set up the training scenario.

Simply place the suit over your existing Duty Range manikin, attach a hosepipe and fill it up with water to achieve the required weight. Up to 150kg of additional weight can be added using water. After the exercise, simply reattach the hose pipe or release the valves and let the water drain away!

Supplied with soft boots, a carry holdall, adapters and water-flow meter to allow you to see how much weight has been added.

RELATED PRODUCTS

We can supply a range of related products which includes Bariatric Pyjamas and a Carry Sheet with a safe working load of 600kg (LOLER certified). We also supply ProMove bariatric slings.

HIRE OR BUY

From September 2017 we will be offering our customers both a hire or a buy option on our standard 90, 180 and 260kgs Bariatric Manikins.

We understand that sometimes your bariatric training requirements are not weekly or even monthly and therefore you might want to consider loaning a Bariatric Manikin for a week or two instead of buying one.

The cost of hiring includes delivery of the manikin to a designated premises, and you can arrange your own courier to return the manikin once you are done.
