FOR PROFESSIONALS WHO SAVE LIVES

## WATER RESCUE TRAINING FOR PROFESSIONALS WHO SAVE LIVES

Ruth Lee Ltd are market leaders in the design and manufacture of training manikins. With more than 60 years' experience, our manikins are tough enough for the fire service and military, and are weighted proportionately to be anatomically correct, for more realistic training.

Our manikins have been designed in consultation with our customers including the Navy and the RNLI and we are confident these are the very best water rescue manikins available on the market.

### MAN OVERBOARD

It is vital that effective MOB drills are conducted frequently with crew members on all vessels - these manikins have proven to be a vital tool in achieving that.

The secret to the performance of this manikin is the balance between the weighting and the buoyancy - This manikin can float at any angle between the vertical and horizontal by simply moving the foam pieces between the chest pockets and the legs, a process which takes seconds.

### SEARCH AND RESCUE

Made in exactly the same way as the popular Man Overboard manikin, the only difference is the colour. The Search & Rescue model is deliberately designed to be difficult to see in the water to enable crews to develop the 'search' element of their Search & Rescue training, making this model particularly suitable for Police Forces or inland water rescue teams.

## SPEAK TO THE EXPERTS

We would be pleased to offer advice on our range of water rescue training products.

### BODY RECOVERY

A pre-established protocol is essential for victim retrieval - the body recovery manikin was predominately designed to aid Police dive teams train to recover bodies from any inland waters or under ice.

The manikin is a variant of the popular Water Rescue manikin - but instead of floating, it sinks. By balancing the buoyancy against the ballast the manikin weighs 50kg on land but only 10kg under water and this manikin is visible to sonar devices.

### CONSCIOUS CASUALTY

This dummy was developed with the co-operation of Surf Life Saving Australia as a water rescue dummy for IRB Racing, IRB driver training & Tube Rescue practice.

During the testing the dummy was also found to be suitable for Jet Ski rescue training and other general rescue scenarios.

In comparison to other manikins, its arms are held aloft to make it easier to spot and then drag on board a moving boat.

### OFFSHORE

This model is heavier than the MOB variety making it suitable for simulating rescues from accommodation areas, engine rooms or drilling platforms. It will withstand a fall of 5-6 meters into water and float vertically to simulate a live person in the water.

It is suitable for emergency BA training, helicopter safety and escape and escape chute training.

Used extensively for training in the wind farm industry, these manikins are suitable for all working at height exercises.
